

COMP2003— Sprint 2 Meeting

17.11.2025

Attendance

All 3 members— Liam, Khyati and Toby— attended the 2nd Sprint Meeting.

Purpose of meeting

- Discuss progress, challenges and client communication thus far since Sprint 1 Meeting.
- Track changes and communication within the group
- Identify next steps, plans for the next sprint

Discussion points

- Informed Vassilis about the presentation with Global 4' SecOps team (Liam)
- What the presentation consisted of: explaining the database back end section of the solution (Liam), the ticket organisation via AI (Toby) and the initial low fidelity designs created and their explanations (Khyati)
- What the client response was for our presentation: (Khyati)
 - their concerns regarding having to learn a new software entirely
 - they would like our solution to be based on Autotask and integrates it, but improves it too.
- Our next steps regarding client feedback: (Khyati gave overview)
 - how we are going to redesign the UI such that it doesn't vastly differ from what Autotask displays (Khyati)
 - researching the Autotask Datto API documentation, understanding the commands (Liam)

- researching the process of programming an AI for the ticket categorisation (Toby)
- How communication with the client is coming along:
 - Liam conveyed to Vassilis how he told Global 4 in the presentation we have a Teams group with relevant Teams Channels set up i.e. Development Discussion, Project Updates & Client Feedback etc.
 - Global 4 used to send all communication through Liam only
 - Now they have demonstrated that they can use Teams to communicate with us altogether.
- Khyati told Vassilis she asked Global 4 to send across an official typed-up list of requirements and expectations for the solution, which they acknowledged and said they would send.
- Vassilis asked if we have uploaded evidence of all this onto GitHub and Trello, which we have.
