

Task

Entra ID

Integrate Microsoft Entra ID to let SecOps login via company domain.

Handles and ensures industry standard security practices are being accomplished

AIService

Analyses, categorises tickets (regardless of whether they belong to Triage or Primary Resource).

Calculates confidence scores.

Stores categorised tickets in relevant database.

Tickets Database

Stores all Triage tickets categorised by the AI Service.

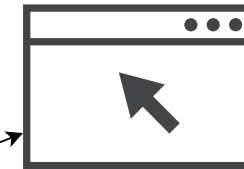

ProfileService

Handles all CRUD actions with SecOps members' specialisms, badges

Specialist Profile Database

Stores the specialisms, badges and achievements related to a SecOps member

Frontend UI

Displays all categorised Tickets, and tickets where current SecOps member in session assigned Primary Resource/Secondary Resource

Displays Closed Tickets

Displays SecOps member's profile

read/write to/from db

Handles CRUD actions for Tickets.

Validates Entra Access Token, uses user claims from the token to retrieve tickets assigned to logged-in SecOps member

CRUD API calls

writes categorised tickets to db

calls AI Service to return JSON list of categorised tickets where current user is PR/SR

sends claims for ProfileService to validate

read/write to/from db

CRUD actions for profile (add specialisations, view, edit and delete)
